

# Typhoid Clinical Assessment Report

## Patient Clinical Parameters

Parameter	Value
Platelet Count	2,500,000
Age	67
Hemoglobin (g/dL)	13.1
Calcium (mg/dL)	10.8
Potassium (mmol/L)	50.0
Treatment Duration (days)	3
Blood Culture Bacteria	Positive
Symptoms Severity	High
Urine Culture Bacteria	Positive
Current Medication	No
Gender	Male

Clinical Interpretation: The patient presents findings consistent with typhoid fever. Positive blood and urine cultures along with high symptom severity indicate an active infection. Regular monitoring and completion of the prescribed treatment duration are recommended.
